1. **Simple and Natural Dialogue / Aesthetics & Min. Design:** Design was pretty simple and easy to understand. Keeping the navigation bar on left side was a plus point since it gave us flexibility to return to any page that user wants.
2. **Speak the User's Language:** There were no technical words or jargons used hence I believe it did speak users language although some things like Filter option in Projects tab, the functionality wasn't clear. Should the user type in Name of project or any word from the description in order to filter the search. The search and Settings button did nothing for now (but I am assuming their functionality is to be implemented later).
3. **Consistency:** The entire website was consistent enough.
4. **Feedback:** Adding the project option should be somewhere on the home page. It is difficult for someone to figure out just at the initial phase how to add the new project.

The screenshot displays a web application interface. On the left is a dark sidebar with navigation icons and labels: DASHBOARD, PROJECTS, EXPERIMENTS, SEARCH, and SETTINGS. The main content area features a search bar at the top right. Below it is a table with the following columns: Name, Owner, Date of creation, and Description. The table contains 5 records, with the first record highlighted. Below the table is a pagination bar showing '<<' '<' '1' '2' '3' '>' '>>'. At the bottom of the table, it says 'Showing 1 to 5 of 12 records'. A plus icon in a circle is located at the bottom right of the interface.

Name	Owner	Date of creation	Description

5. **Clearly Marked Exits:** The tool definitely has clear exits. User can easily navigate to the back page.

The page for viewing the experiments conducted is well explains the statistics of the experiment but would also be good if it defined the purpose of experiment as well. Overall the tool has been well designed. Apart from a minor things that would make user a little confused. On dashboard, the Experiments running or failed belong to which of the project?
